

Array Business Continuity (ABC) 30-Day Certificates provide scalable and affordable burst capacity to meet the secure remote access requirements of both planned and unplanned incidents.

Available for *AccessDirect* and *DesktopDirect*, 30-Day Certificates offer protection against local and global circumstances beyond IT's control and enable cost-effective capacity planning for organizations with seasonal or forecasted peak usage.

■ Unanticipated & Anticipated

Events such as hurricanes, snow days, transit disruptions and the threat of global terror or pandemics make the world and the work environment increasingly unpredictable. More than ever, organizations require solutions that keep their employees up and running in the face of unanticipated events.

In addition, many organizations have seasonal or anticipated usage patterns. For example: tax firms needing additional remote access capacity during filing season or colleges and universities needing added capacity during registration. For these organizations, paying for peak remote access capacity year-round is not cost-effective.

■ Array Business Continuity

An Array SPX Series Universal Access Controller combined with *Access Direct* or *DesktopDirect* and 30-Day Certificates serve as the ideal end-user access component of a complete business continuity plan (BCP).

A clientless, browser-based architecture means workers can access business critical resources anytime, anywhere. It also means the IT department is not saddled with costly and burdensome administrative tasks before or during unanticipated events.

■ The Array BCP Advantage

While secure remote access is a compelling technology for business continuity planning, most competing vendors require businesses to buy contingency licenses outright and most competing products are designed with just enough capacity to support the limited needs of day-to-day remote access.

Only Array has the scalability and performance to support an entire workforce on a single system while maintaining a premium experience for each user. And because helpdesk calls are the last thing you need in an emergency, Array offers *DesktopDirect* - the ability for first time users log into a company URL and immediately see their familiar work desktop.

ABC Certificate Highlights

- **Allows customers to select hardware appropriately priced for day-to-day secure remote access**, while gaining the headroom to support business continuity
- **Cost-effective solution for anticipated and unanticipated events** requiring a surge in remote user capacity
- **Guarantees entire workforce can log in simultaneously** should the need arise
- **Scales to support 64,000 concurrent users** on a single system
- **Capable of sustaining single-digit millisecond latency** regardless of the number of concurrent users
- **No need to purchase multiple systems or concurrent licenses** that go unused
- **Proven during the New York City transit strike** and over the course of Hurricane Katrina

■ 30-Day Certificate & Process

30-Day Certificates range in denominations from 50 to 20,000 concurrent users licenses and, once activated, augment an Array system's base concurrent license pack for a period of 30 days. Certificates are valid for a period of one year from the date of purchase, and require an existing Array support plan.

Customers receive a boxed hardcopy of their purchased certificate, labeled with maximum burst capacity. 30-Day Certificates stay on the shelf in a safe location until needed.

In the event of planned or unplanned incidents, customers fax their certificate to Array or call Array directly to request a start date. Array support then issues a license key enabling the burst limit and provides the time-stamped key to the customer via fax or email as requested. That's it...back in business!
